

What If: Future Use Case Exploratory

UNOS / OPTN Data-to-Product Growth Concepts | Croom Lawrence / PredictCare.ai | July 2026 | Confidential draft for discussion

1. Executive thesis

The UNOS / OPTN data ecosystem can support a new generation of mission-aligned commercial solutions — not by “selling data,” but by packaging **permissioned, de-identified, aggregated, human-governed transplant intelligence** into tools that help customers make better operational decisions.

This exploratory abstracts the future use cases identified in the database audit into customer-facing solution concepts. The purpose is not to claim these products exist today or that all required data is immediately available. The purpose is to show how UNOS could translate its unique data, workflow, policy, and trust position into responsible growth products for OPOs, transplant centers, labs, device/logistics partners, payers, researchers, philanthropies, and public-interest stakeholders.

2. Strategic frame: from data stewardship to performance infrastructure

Current asset	Future product abstraction	Customer value
Candidate, donor, offer, transplant, follow-up, OPO, center, API, and outcomes data	Transplant performance intelligence layer	Better decisions, fewer blind spots, less administrative burden
DonorNet / UNet operational exhaust	Workflow-native decision support	Faster responses, safer acceptance opportunities, reduced nonuse
TIEDI and reporting workflows	Data-quality and audit-readiness automation	Fewer errors, lower staff burden, improved readiness
TransNet / logistics timestamps	Organ logistics intelligence	Reduced delay risk, better handoffs, cold ischemia visibility
Benchmarking and SRTR-style reporting	Executive performance command centers	Board-ready insights and earlier intervention
UNOS trust + national role	AI-readiness and transformation advisory	Customers modernize responsibly without compromising mission

3. “What If” use case portfolio

#	What if UNOS could...	Product concept	Primary buyer	Data/asset basis	Value created	Commercial package
1	Show each transplant center where it may be declining organs more conservatively than comparable peers?	Offer Acceptance Optimizer	Transplant center administrator, medical director, quality leader	Donor profiles, offers, accept/decline patterns, outcomes, peer benchmarks	Increase safe acceptance, identify growth opportunities, reduce missed transplants	Analytics subscription + advisory
2	Help clinicians understand whether accepting now may be better than waiting for a future offer?	Next-Best-Offer Advisor	Transplant physicians, program leaders	DonorNet offer history, candidate risk, time-to-next-offer, mortality/graft outcomes	Human-governed decision support at point of offer	Workflow-native decision support pilot
3	Help OPOs see exactly where donor/organs are lost from referral through placement?	OPO Yield Intelligence	OPO CEO/COO/quality leader	Referral, authorization, donor management, recovery, placement, disposition	Higher yield, fewer process leaks, better quality improvement	OPO Performance Command Center
4	Break organ nonuse into donor quality, center behavior, logistics, data quality, or process factors?	Nonuse Root-Cause Dashboard	OPOs, centers, HRSA/policy stakeholders	Donor disposition, decline reasons, logistics, acceptance patterns, outcomes	Focus interventions on actual bottlenecks rather than generic discard narratives	Diagnostic + subscription
5	Warn transplant programs before SRTR/MPSC performance risk becomes public or regulatory?	SRTR/MPSC Early Warning	Center leadership, quality, board	Outcomes, volume, expected-risk models, follow-up data, peer benchmarks	Earlier remediation, reduced regulatory/reputation risk	Quality-risk subscription
6	Detect missing, late, contradictory, or audit-risk OPTN/TIEDI data before submission or review?	Data Quality Copilot	OPO and center data teams	TIEDI forms, submission history, validation rules, audit patterns	Lower administrative burden, better data integrity, fewer audit surprises	SaaS + implementation support
7	Map national transplant demand, access gaps, disease burden, and center/OPO archetypes for partners?	Transplant Market Access Atlas	Device, diagnostic, pharma, payer, policy partners	De-identified volume, geography, organ, disease, waitlist, transplant, outcomes	Better market planning and mission-aligned partnerships	Partner intelligence product
8	Link machine	Perfusion Device	Device companies,	Device data, donor	Evidence generation,	Registry + analytics

	perfusion/device data with transplant outcomes and adoption patterns?	Outcomes Registry	centers, OPOs	characteristics, perfusion variables, transplant outcomes	adoption support, device benchmarking	agreement
9	Help OPOs and centers expand DCD/NRP/DPP safely with process and outcome intelligence?	DCD Expansion Intelligence	OPOs, transplant centers, device partners	DCD timing, agonal phase, recovery process, perfusion, outcomes	Increase usable organs, standardize best practices	Transformation program
10	Help HLA labs and kidney programs better manage sensitized candidates and compatibility pathways?	Histocompatibility Intelligence	HLA labs, kidney programs	HLA, CPRA/PRA, unacceptable antigens, crossmatch, outcomes	Improve strategy for hard-to-match candidates	Specialist analytics module
11	Predict logistics delay risk and identify transport/courier handoff bottlenecks?	Organ Logistics Optimization Platform	OPOs, logistics partners, centers	TransNet events, timestamps, distance, transport mode, exceptions, ischemic time	Reduce delay, improve chain-of-custody visibility, protect organ quality	Logistics analytics + partner platform
12	Identify inequities across listing, offers, wait time, acceptance, transplant rate, and outcomes?	Equity / Access Analytics	HRSA, centers, foundations, policy stakeholders	Demographics, geography, waitlist, offers, transplant, outcomes	Mission-aligned transparency and targeted interventions	Sponsored initiative / philanthropy-backed product
13	Create a board-ready command center for every OPO or transplant center executive team?	Transplant Performance Command Center	OPO and center executives	Benchmarks, KPIs, quality risk, utilization, pipeline of interventions	Executive alignment, operating cadence, performance improvement	Premium subscription + advisory
14	Turn every meeting, proposal, diagnostic, and customer interaction into structured product and market intelligence?	Commercial Voice-of-Customer Intelligence	UNOS commercial leadership	Call transcripts, CRM, proposals, objections, customer feedback	Faster product-market fit and better messaging	Internal growth OS / RevOps capability

4. Priority use cases for the \$10M OPO pipeline

The OPO Commercial Growth Plan should lead with use cases that are high-value, mission-safe, and credible for H2 2026.

Priority	Use case	Why it fits the OPO wedge	Suggested offer
1	OPO Yield Intelligence	Directly maps to OPO performance, organ utilization, and operational improvement	OPO Performance Command Center
2	Nonuse Root-Cause Dashboard	Converts discard/nonuse debate into actionable process intelligence	Diagnostic → subscription
3	Data Quality Copilot	Reduces administrative burden and improves audit/readiness	SaaS + implementation support
4	DCD Expansion Intelligence	Aligns with future donor-pool growth and device/perfusion innovation	Transformation advisory
5	Logistics Optimization Platform	Clear operational ROI and partner potential	Analytics pilot with OPO/logistics partner
6	Equity / Access Analytics	Strong mission and philanthropy alignment	Sponsored initiative / foundation pitch

5. Future product families

Product family	Included use cases	Best initial buyer	Revenue model
OPO Performance Suite	OPO Yield Intelligence, Nonuse Dashboard, DCD Expansion, Logistics Optimization	OPO CEO/COO/quality leader	Diagnostic + annual subscription + advisory
Transplant Center Growth & Quality Suite	Offer Acceptance Optimizer, SRTR/MPSC Early Warning, Waitlist Conversion, Data Quality Copilot	Center administrator / medical director	Subscription + implementation
Partner Intelligence Suite	Market Access Atlas, Perfusion Registry, Device Outcomes, Logistics Benchmarking	Device/logistics/diagnostic/pharma/payer partners	Enterprise data/intelligence agreement
Responsible AI Readiness Suite	AI maturity assessment, workflow audit, data-quality automation, governance roadmap	OPOs, centers, health systems	Consulting + managed operating cadence
Mission Impact Suite	Equity/Access Analytics, philanthropy-funded OPO improvement initiatives, public-interest dashboards	Foundations, HRSA/public-interest stakeholders	Grant/partner-funded initiative

6. Commercial sequencing

Phase	Timeframe	Product motion	Goal
Now	Aug 2026	Package three exploratory concepts into executive one-pagers: OPO Yield, Nonuse Root Cause, Data Quality Copilot	Create meeting assets for top OPO accounts
Near	Sep–Oct 2026	Run paid or sponsored diagnostics with 4–6 OPOs	Generate referenceable proof and qualified pipeline
Far	Nov–Dec 2026	Convert diagnostics into command-center subscriptions and partner-funded initiatives	Build \$10M+ qualified pipeline and 2027 expansion base
2027	Jan+	Expand to transplant centers, partner intelligence, philanthropy-funded programs, and responsible AI readiness	Build recurring revenue products

7. Compliance and trust guardrails

These concepts should be presented as **exploratory, governed, and mission-aligned**. They should not imply unrestricted commercial access to patient-level data or operational systems.

Safe language

- “What if UNOS could responsibly package de-identified, aggregated transplant intelligence...”
- “Permissioned analytics under appropriate data-use, privacy, and governance controls”
- “Human-governed decision support, not automated clinical decision-making”
- “Operational benchmarking and performance improvement”
- “Mission-aligned growth that helps customers improve quality, utilization, equity, and readiness”

Avoid

- “Sell the database”
- “Monetize patient data”
- “Replace clinician judgment”
- “Guarantee more transplants or better survival” without validation
- “Use restricted data commercially” without specifying permission, governance, and compliance

8. Leadership narrative

What if UNOS became the trusted productization layer for the transplant ecosystem — converting nearly four decades of national transplant data, workflow expertise, and customer trust into governed intelligence products that help OPOs, centers, and partners make better decisions, improve performance, reduce burden, and advance the mission?

The strongest near-term message is not “new software.” It is:

UNOS can help every transplant stakeholder move from retrospective reporting to proactive, governed, workflow-native intelligence — starting with OPO performance and organ utilization.

9. Recommended next step

Build three customer-facing concept sheets for the top OPO sales motion:

1. **OPO Yield Intelligence** — where donor/organs are lost and what to do next.
2. **Organ Nonuse Root-Cause Dashboard** — why organs are not used and which levers are actionable.
3. **Data Quality Copilot** — how OPOs/centers reduce reporting burden and improve audit readiness.

Each concept sheet should include buyer, pain point, data basis, mock dashboard, implementation path, pricing range, compliance note, and 90-day pilot design.
